<i>Preface</i>	v
<i>Syllabus</i>	vii
Experiment 1	
To study the construction, parts, working, and uses of a compound microscope	1
Experiment 2	
To study the microscopic structure and identification of epithelial and connective tissues	5
Experiment 3	
Microscopic study of muscular and nervous tissues	18
Experiment 4	
Identification of axial bones	23
Experiment 5	
Identification of appendicular bones	32
Experiment 6	
Introduction to Haemocytometry	36
Experiment 7	
To study and demonstrate the estimation of Total Blood Count (TBC) using an Automated Haematology Cell Analyzer and interpret the obtained haematological parameters	40
Experiment 8	
Enumeration and Interpretation of Total White Blood Cell (WBC) Count, Differential Leukocyte Count (DLC)	44
Experiment 9	
Enumeration and Interpretation of Red Blood Corpuscles (RBC) Count	50

Experiment 10

Determination of Bleeding Time and Clotting Time 54

Experiment 11

Estimation and interpretation of Haemoglobin content59

Experiment 12

To determine the blood group of a given blood sample using the ABO and Rh blood grouping system by the slide agglutination method.....62

Experiment 13

Determination and interpretation of erythrocytes (RBC) sedimentation rate67

Experiment 14

Determination of Heart rate, pulse rate and blood pressure.....71

Experiment 15

Recording and interpretation of ECG.76

Experiment 16

To study the cardiovascular system and integumentary system81

Experiment 17

Case Studies/Files of patients with Anaemia, Thalassemia, Haemophilia, Leprosy, Gout, Hypertension and Ischaemic heart failure..... 98
