

# Contents

<i>Preface</i> .....	v
<i>Acknowledgements</i> .....	vii
<i>GATE Syllabus</i> .....	ix

## Section 1: Historical Perspective

1. Introduction to Microbiology .....	3
2. History of Microbiology .....	7
3. Evolution of Microbial Life .....	18

## Section 2: Methods in Microbiology

1. Pure Culture Techniques .....	27
2. Principles of Microbial Nutrition .....	31
3. Antigen and Antibody Detection Methods for Microbial Identification .....	34
4. Microscopy .....	37
5. Polymerase Chain Reaction (PCR) .....	44
6. Next Generation Sequencing Technologies in Microbiology .....	47

## Section 3: Microbial Taxonomy and Diversity

1. General Characteristics of Microorganisms .....	53
2. Important Group of Prokaryotes .....	69
3. Endospore Forming Bacteria .....	75
4. Microbial Phylogenetics .....	80
5. Study of Viruses .....	82

## Section 4: Prokaryotic Cells: Structure and Function

1. Prokaryotic Cells .....	99
2. Bacterial Cell Structure and Function .....	103
3. Bacterial Locomotion .....	119

## **Section 5: Microbial Growth**

1. Microbial Growth and their Mathematics.....	125
2. Synchronous Growth .....	136
3. Continuous Culture .....	138
4. Bacterial Biofilm.....	140

## **Section 6: Control of Micro-organisms**

1. Basic Terms.....	145
2. Factors Affecting on the Efficiency of an Antimicrobial Agent.....	146
3. Physical Methods for Microbial Control .....	147
4. Chemical Agents for Microbial Control .....	150
5. Testing of Disinfectants .....	153

## **Section 7: Microbial Metabolism**

1. Bioenergetics .....	159
2. Bioenergetics Cycles.....	162
3. Anaerobic Respiration .....	168
4. Lipid Catabolism .....	171
5. Protein Catabolism.....	172
6. Microbial Photosynthesis.....	173

## **Section 8: Microbial Diseases and Host Pathogen Interaction**

1. Normal Flora of the Human Body .....	181
2. Immunity System and their Types .....	184
3. Lymphoid Organs of Immune System.....	188
4. Lymphocytes of the Immune System .....	193
5. Antigen: Structure and Types .....	196
6. Antigen Processing and Presentation.....	199
7. Antibody: Structure and Types .....	202
8. The Complement System.....	206

---

9. Vaccine and their Different Types.....	209
10. Antigen-Antibody Reaction.....	211

### **Section 9: Chemotherapy/Antibiotics**

1. History, Development and Characteristics of Chemotherapeutic Agents.....	217
2. Type and Mechanism of Chemotherapeutic Agents .....	220
3. Antibiotic Resistance and Development of New Therapeutics .....	234
4. Multidrug-Resistant Microbes and Cross Resistance .....	239

### **Section 10: Microbial Genetics**

1. Mutations and their Types.....	243
2. Bacterial Genetic System.....	249
3. Plasmids.....	257
4. Ames Test for Carcinogens.....	260
5. Lac Operon Model.....	262
6. Organization of Chromosomes in Prokaryotes.....	266

### **Section 11: Microbial Ecology**

1. Microbial Interactions.....	275
2. Biogeochemical Cycles .....	278
3. Groups of Microorganisms .....	285
4. Decomposition of Organic Matter .....	287
5. Soil Health and Fertility.....	288
6. Bioremediations.....	289
7. Metagenomics.....	291
